
AI & AUTOMATION · PHASE 1 + 1.5

Replace the assistant. Reclaim the desk.

A phased AI implementation for Lion Public Adjusting. Starting with the workflow eating the most hours: email triage, correspondence logging, and claim file organization.

PREPARED FOR

Fort Mill, SC

VALIDITY

30 days from issue
Pricing locked through
June 22, 2026

Phase 1: your inbox first

An AI agent that runs on your Gmail and Google Drive. It triages incoming mail, files attachments to the right claim folders, and writes an audit log so you can correct it during the first 30 days. Your VA stays in the loop on anything the agent flags as ambiguous until Phase 1.5 cutover.

CAPABILITY	WHAT YOU GET
Email categorization	Each incoming email gets matched to a claim and labeled. Anything the agent isn't sure about lands in an Unsorted bucket for VA review. The agent applies labels from a finalized list (we lock the taxonomy in Week 1); it doesn't create new ones, so any future labels you want must exist in Gmail first.
Attachment filing	Attachments file to the right claim folder, renamed to your convention: YY.MM.DD – Author – Description – \$Amount . Your own manual uploads stay untouched.
Smart routing	Files into existing folders confidently and learns your vendor sub-folder preferences during the first 30 days. When unsure, it flags rather than guesses.
New-claim flagging	New-claim-looking emails get flagged for your review and attachments parked in a holding folder. Full new-claim intake (web form, auto-folder creation, Claim Tracker rows) lives with the CRM in Phase 2.
Redundant filing	Settlement docs land in both Estimates and Accounting. Sent emails with attachments save to Outbox as a documentation package. Matches your existing duplication rule.
Agent log	A Google Sheet in your Drive with one tab per workflow step. Every action gets a row showing what was read, what was matched, where it filed, and any flags.

Phase 1.5: OpenPhone, Telegram, and team rollout

Once your inbox is stable, Phase 1.5 adds OpenPhone call logging, your private Telegram bot, the weekly digest, and rolls the same email and file workflow out to Artin and Chelsea.

CAPABILITY	WHAT YOU GET
OpenPhone call logging	Every completed call gets its AI summary pulled, matched to a claim by phone number, and filed into that claim's Drive folder. Calls without a match land in a flagged bucket for your review. Inbound, outbound, voicemail. Uses your existing OpenPhone Business plan.
Telegram bot (yours)	A private read-only bot. Ask "what was the last correspondence on claim 12345?" or "list all open claims with Mercury," and it answers from the agent's history.
Weekly digest	A summary message to your Telegram one to two times a week, covering what the agent did. Cadence tuned during onboarding.
Team rollout (Artin and Chelsea)	The same email and file workflow extends to their Gmail and Drive at no additional build cost. Same label taxonomy, applied to each Gmail before they go live.
VA released	At Phase 1.5 cutover.

Not in Phase 1.5: team Telegram, per-user permissions, assigned-claim visibility, web frontend (all Phase 2). Accounting integrations (Phase 3). Field estimating (Phase 4).

How you'll talk to it

Telegram. Free, fast, works on phone and desktop, no app required. Slack or iMessage are possible alternatives but add cost or third-party gateways; we recommend Telegram and that's what's in Phase 1.5 pricing.

What you own at handoff

Everything below transfers to you if you take the ownership option. No proprietary lock-in, no Niewdel dependencies after the swap.

YOU RECEIVE	WHAT IT IS
n8n workflow definitions	The visual automation diagrams that run the agent. Exported as JSON, importable into your own n8n Cloud account. Modifiable without writing code.
Custom OpenPhone integration code	The webhook code that pulls call summaries from OpenPhone and files them. Standard JavaScript, runs inside n8n.
Runbook documentation	Step-by-step guide for everyday operation, troubleshooting, and adding new employees.
Account swap	Credentials migrated from our Claude API key and our n8n Cloud account to yours. After the swap you pay those vendors directly, not us.
Your data, already yours	The agent log, the Lion's Den, the Claim Tracker, all attachments, and all OpenPhone summaries already live in your Google Drive. Nothing migrates.

Timeline

10 weeks from kickoff to full Phase 1.5 cutover.

- **Weeks 1-6 (Phase 1):** Week 1 we lock the label taxonomy with you and configure access. Weeks 2-5 we build the agent against your inbox with iterative check-ins. Week 6 we test on live emails (VA in the loop), train you, and cut over. On call for the first 48 hours.
- **Weeks 7-10 (Phase 1.5):** OpenPhone webhook pipeline, your Telegram bot, weekly digest, team rollout (OAuth + label alignment for Artin and Chelsea). Week 10 cutover, VA released, on call for 48 hours.

Investment

Phase 1 build

\$6,999

One-time. Design, build, test, train, and cut over the agent on your inbox. 6 weeks.

ONE-TIME

Phase 1.5 build

\$2,999

One-time. OpenPhone call logging, your private Telegram bot, weekly digest, and team rollout to Artin and Chelsea at no additional build cost. VA released at cutover. 4 weeks.

ONE-TIME

Managed onboarding

\$950

4 months of active operations starting the month after Phase 1.5 cutover. Monitoring, tuning, edge-case handling, and training so you can operate the system independently. Includes n8n Cloud Pro hosting and up to \$150/month in Claude API tokens; overages on either passed through to Lion PA at cost.

PER MONTH · 4 MONTHS

Final delivery & ownership transfer

\$1,999

One-time at end of managed onboarding. Workflows, code, credentials, and runbook transferred to your accounts (see "What you own at handoff"). After this you own the system outright.

ONE-TIME AT HANDOFF

6-month total: \$15,797 (\$9,998 Phase 1 + 1.5 build + \$3,800 managed onboarding + \$1,999 final delivery handoff).

Payment terms

- Build fee: 50% upfront (\$4,999) to begin work, 50% (\$4,999) at Phase 1.5 go-live.
- Managed onboarding: invoiced monthly, starting the month after Phase 1.5 cutover.
- Final delivery handoff: invoiced at completion.
- Deposit and all monthly payments can be made by ACH or by check mailed to Niewdel. ACH is preferred.

Your two options at the end of managed onboarding

1. Continue on Niewdel infrastructure with active management at \$950/month. Same rate as managed onboarding. Hosting, monitoring, tuning, issue handling, and API key management. Includes n8n Cloud Pro hosting and up to \$150/month in Claude API credits; overages on either pass through to you at cost.

2. Pay the \$1,999 handoff and own the system outright. Workflows, code, credentials, and runbook transferred to your accounts. No further fees to Niewdel. You run the system on your own n8n Cloud and Claude API accounts.

Adding new employees after Phase 1.5

- **While on the \$950/month managed plan:** \$699 per new hire. Covers Gmail OAuth, label alignment, Drive access, and agent config for their inbox.
- **Post-handoff:** your responsibility per the runbook (create labels, add OAuth credentials, redeploy). Or re-engage Niewdel as a separate scoped project at then-current rates, higher than \$699 to account for the access rebuild.

Third-party costs (billed to your accounts)

SERVICE	ESTIMATED COST	WHO BILLS YOU
Claude API	\$80-150/mo (Phase 1) → \$150-450/mo (Phase 1.5, all three inboxes)	Run on Niewdel's account through managed onboarding; up to \$150/month in tokens included, overages passed through at cost. Transfers to your Anthropic account at handoff.
n8n Cloud	\$60/month (Pro plan)	Covered by management fee. Overages above Pro plan limits passed through at cost. On your account post-handoff.
Telegram	Free	No vendor cost.
OpenPhone, Gmail, Drive	Existing cost	Already in your stack. No additional charge.

The bigger roadmap

Phase 1 + 1.5 is the foundation. Each phase below gets its own discovery and quote after the prior phase ships, so scope reflects what you've actually learned, not a guess up front.

PHASE 2

Lion CRM

A mobile-responsive web app that replaces the Lion's Den and Claim Tracker as the single source of truth. Per-user permissions and assigned-claim visibility for the team. Client-facing intake form that creates draft claims. Single claim view with correspondence, status, payments, and attachments. Becomes the team's primary interface. Your Telegram bot can stay on as a quick-query channel if you want it, or get retired if the web app covers everything you need. Your call at Phase 2 discovery.

PHASE 3

Accounting & commission tracking

QuickBooks automation, iink data capture, variable fee splits, and per-check correspondence records. Replaces the manual P&L work today.

PHASE 4

Estimating & scope sheets

Field notes to scope sheet. You document conditions on site; the system produces estimates and reports for your estimators to refine.

Liability & security

Niewdel is responsible for the agent's code, workflow logic, and configuration during the build and managed period. Encrypted credential storage, least-privilege OAuth scopes, audit logging, and incident response on our side. If we negligently cause a breach, we own remediation and notify you within 48 hours.

Niewdel is not responsible for compromises originating from Lion PA's team (phishing, weak passwords, shared credentials, lost devices); third-party vendor outages or breaches (Google, OpenPhone, Anthropic, n8n Cloud, Telegram); anything post-handoff once ownership has transferred; modifications you or your team make to workflows, code, or credentials; Lion PA's own regulatory obligations under CCPA, GLBA, and applicable state insurance privacy laws; or indirect, consequential, or punitive damages.

Liability cap: Niewdel's total liability is capped at the greater of total fees paid under this agreement at the time the claim arises or the build deposit actually paid. Survives termination.

Lion PA's obligations: Maintain reasonable security (strong passwords, MFA on Google, OpenPhone, and Telegram; no shared credentials; prompt offboarding). Notify Niewdel within 24 hours of any suspected compromise on your side. Maintain your own regulatory compliance program.

Next steps

1. Review this proposal. Send questions back any time.
2. Sign below and pay the 50% build deposit of \$4,999 (ACH preferred, check by mail accepted).
3. We schedule a 60-minute kickoff call to map exact rules and access.
4. 10 weeks later your VA is released, OpenPhone is logging calls automatically, your team is running on the agent, and you've got a private bot on your phone that knows everything happening in your inbox.

Approval window: Pricing held for 30 days from proposal date. If we kick off by June 22, 2026, the timeline above stands. After that, scheduling depends on capacity.
